

# Engine Dynamic and NVH Simulation in ADAMS

Yeongching Lin, Ph. D.

Neal Berner

Mike Aimone

FORD Motor Company

ADAMS User's Conference 1999 in Berlin

# Dynamic Analysis Capability

- \* Crank/Block Dynamic Analysis
- \* Timing Chain Dynamics
- \* Valve Train Dynamics
- \* Front End Accessory Belt Drive Tool

# Objective

- To Provide engineers with the capability to analytically evaluate the engine dynamics and NVH performance.
- Reduce development cost and time
- Reduce warranty cost

# Timing Chain System

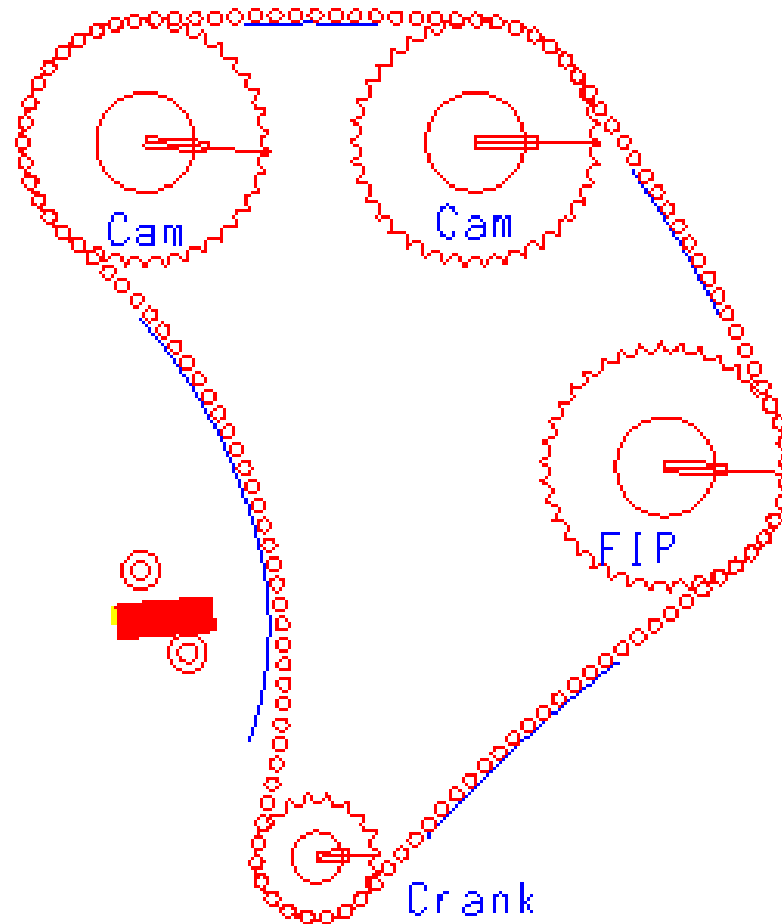

- \* Hydraulic Tensioner
- \* Static and Dynamic Friction
- \* Chain Tension
- \* Roller Chain and Silent Chain
- \* Primary and Secondary Chain Drive System
- \* GUI Interface
- \* Transient and Steady-State Analysis

# Chain Drive Application

- \* Predict chain tension
- \* Calculate impact force to reduce face wear
- \* Chain noise prediction - transfer function
- \* Bearing Load calculation

# Roller/Silent Chain System Validation

Puma Engine Chain Drive System

PUMA Chain Tension at 3750 RPM

Impact Force

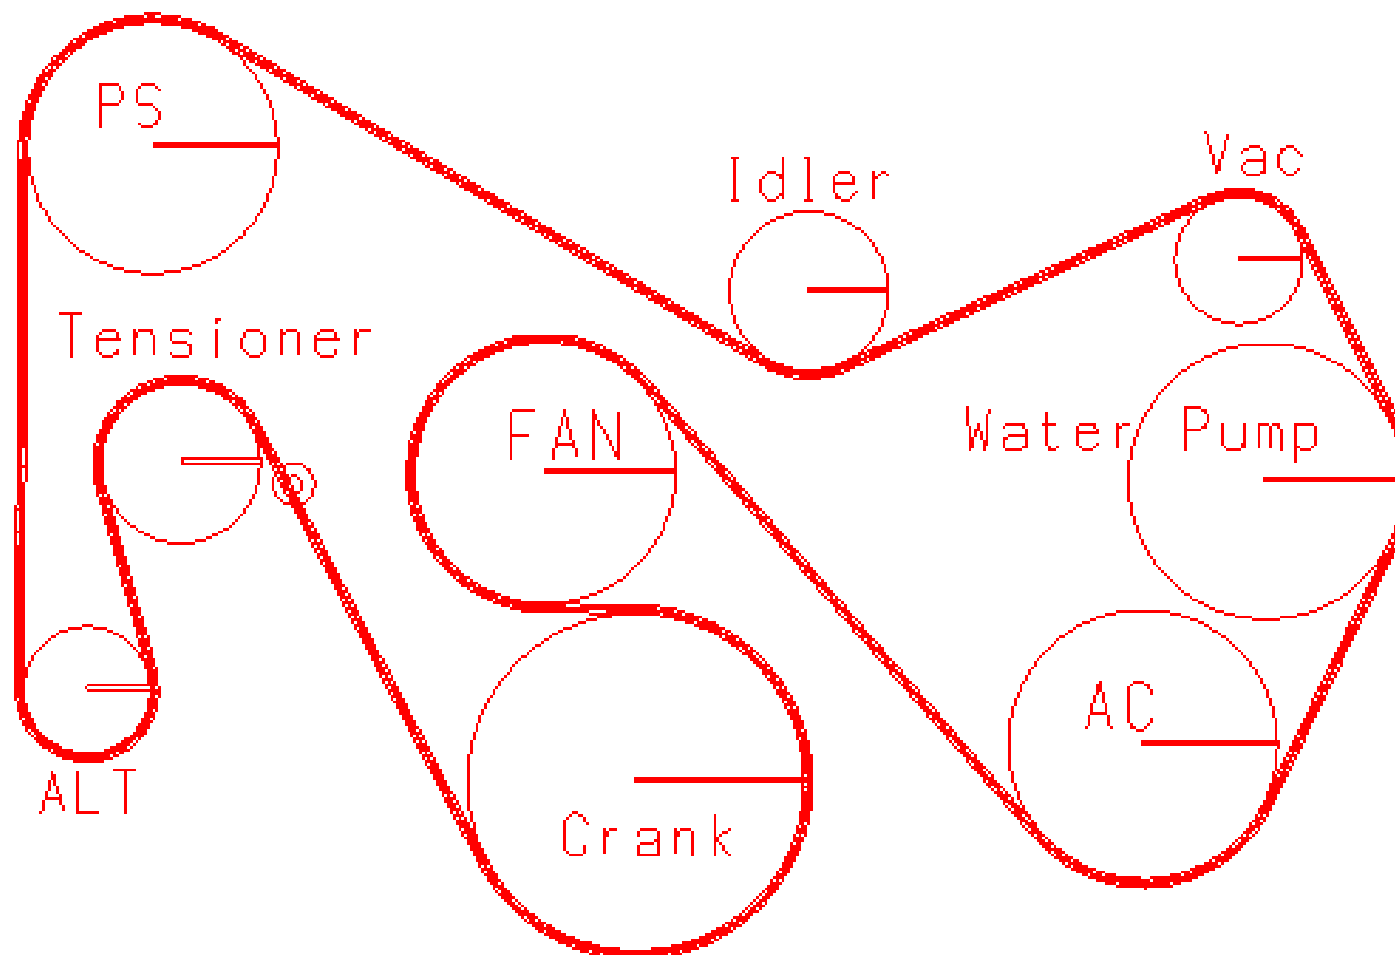

# FEAD Analysis Tool

- \* Non-linear Stiffness ( $K_c + K_s$ )
- \* Static and Dynamic Friction
- \* Large Deflection
- \* Belt Slippage
- \* Belt Span Vibration
- \* Belt Span Tension
- \* Belt squeal
- \* Clutch Dynamic Response
- \* Transient and Steady-State Analysis

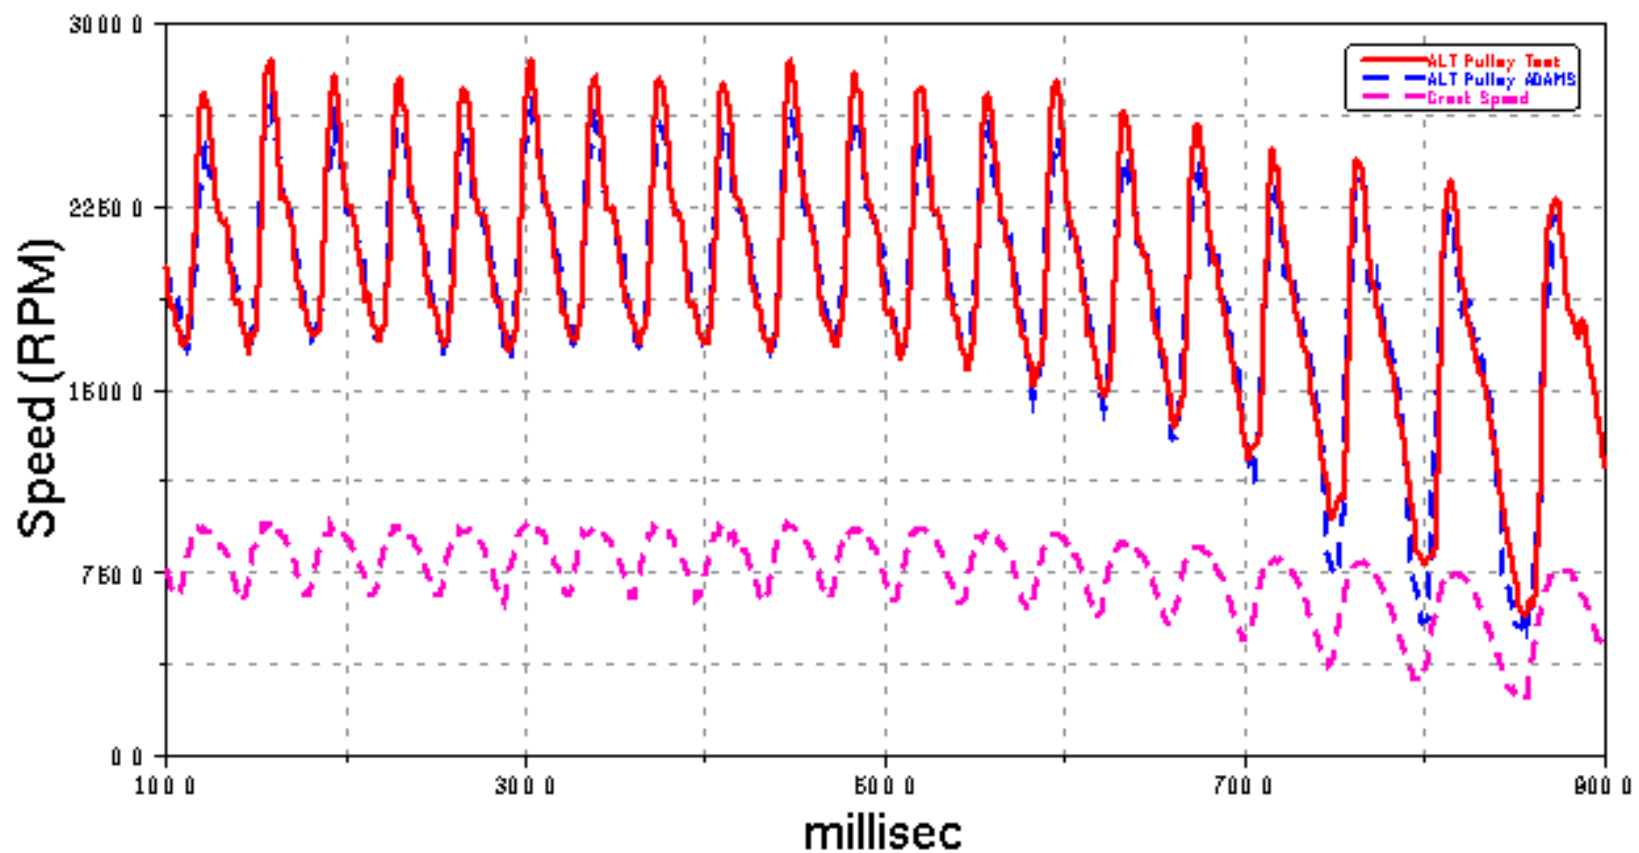

# FEAD Validation

FEAD Configuration A

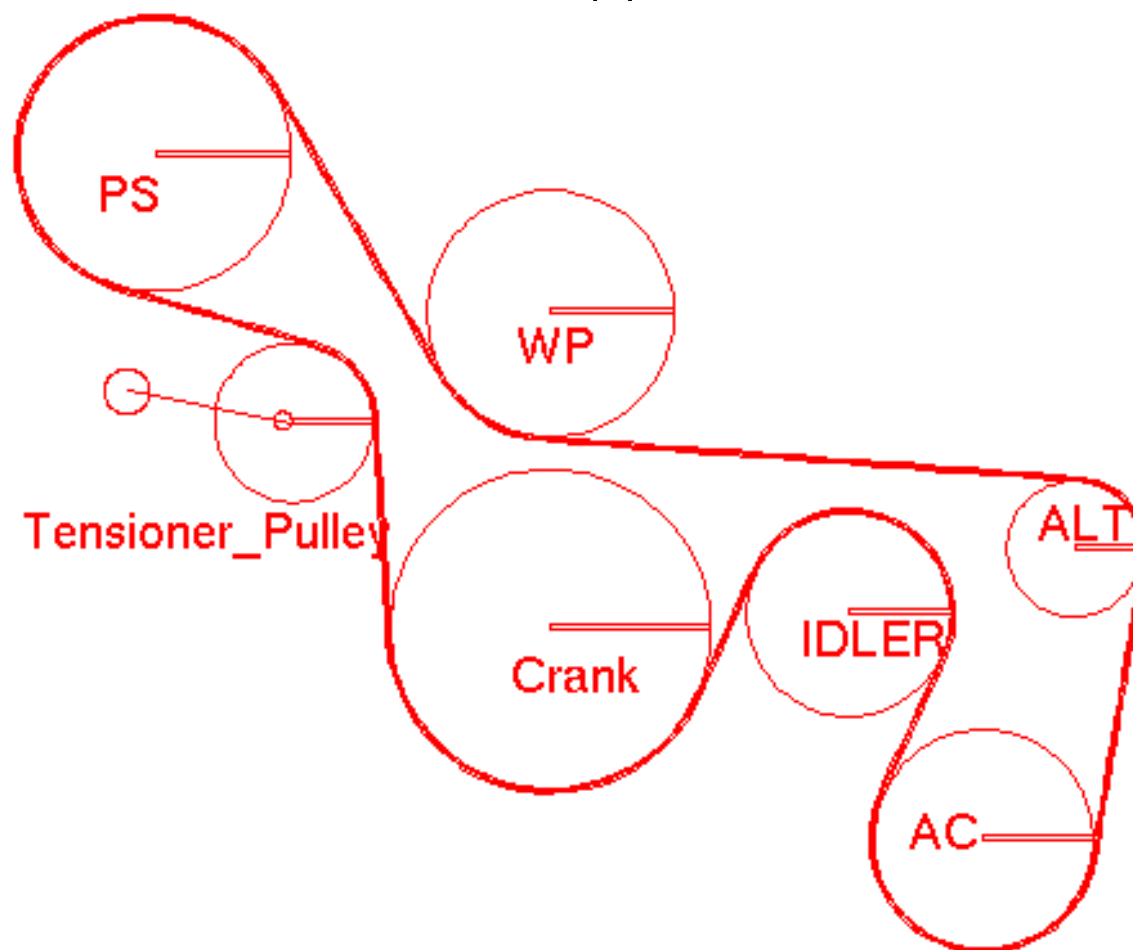

### PUMA V184 FEAD ALT Pulley Speed

# Belt Tension

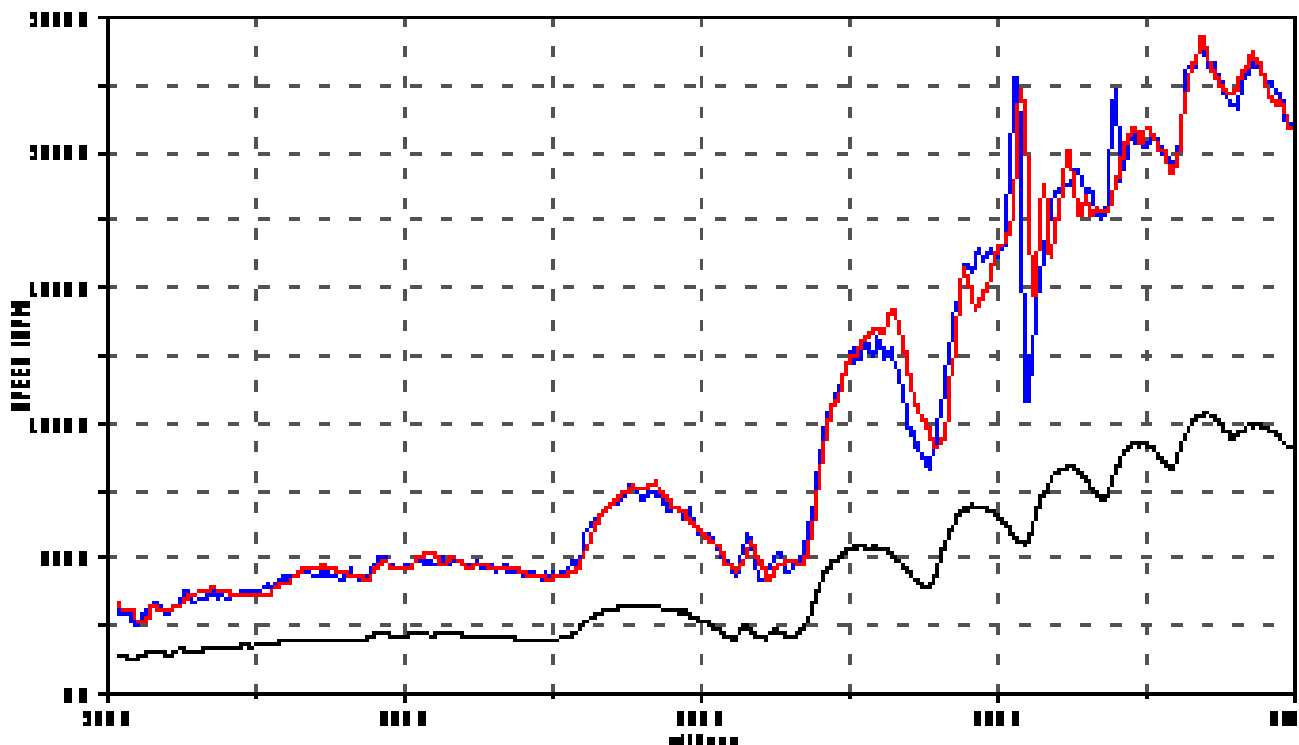

# FEAD Configuration B

# Validation

Blue - Alternator Speed (ADAMS):Red - Alternator Speed (Test Date)  
Black - Crank Speed (RPM)

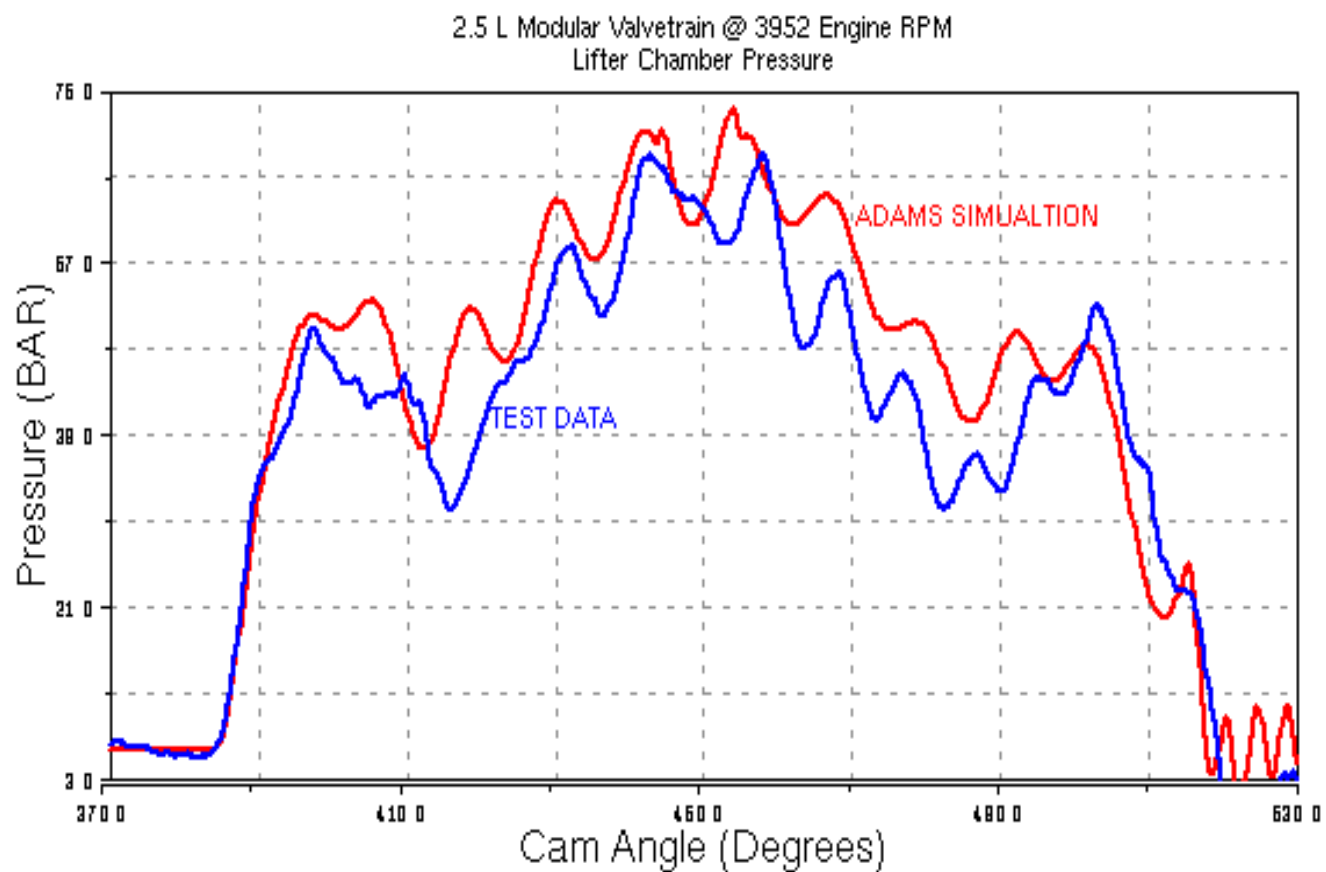

# Valve Train Dynamics

Valve Train Configuration

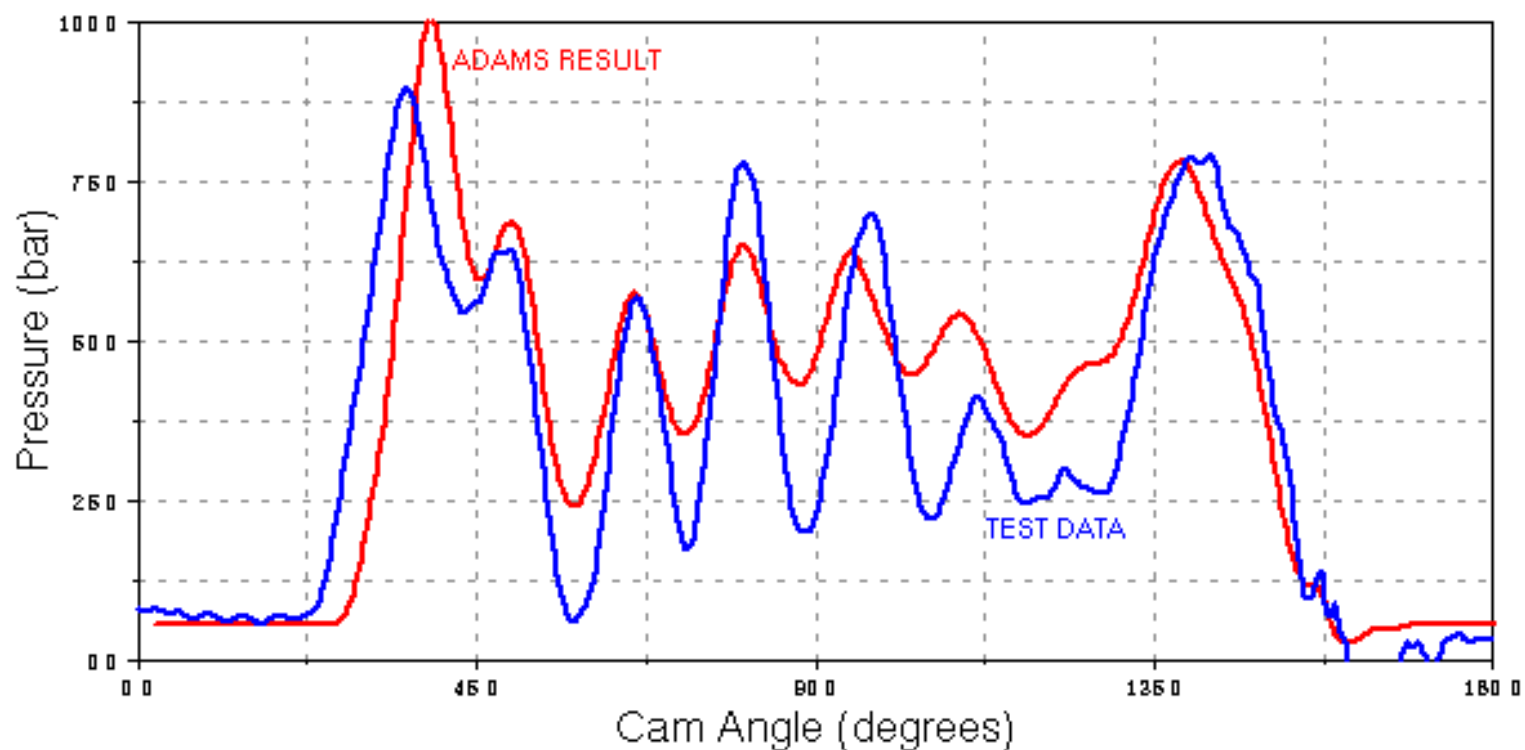

# Valve Train Validation

# Valvetrain Validation

2.5 L Modular Valvetrain @ 6006 Engine RPM  
Lifter Chamber Pressure

# Status of ADAMS Cam Drive Development

- \* Over head valve train is completed
- \* RFF configuration validation is finished
- \* *Coupling between chain and valve train - on going*
- \* *NVH calculation - on going*
- \* *Timing Belt modeling - on going*

# Future Work

- \* Need further developments in noise prediction and life cycle calculation
- \* Incorporate modeling efficiencies in order to reduce run time
- \* Complete engine dynamic analysis
