

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

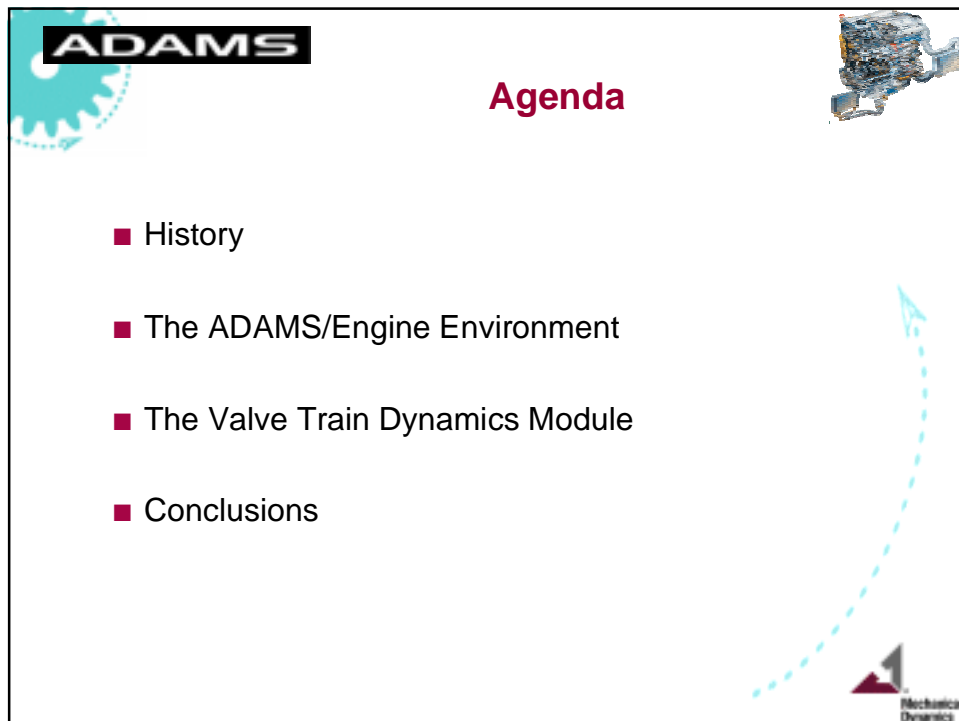

The slide features a large, light-colored background image of an engine. In the top left, there are two interlocking gears, one purple and one teal, with dashed arrows indicating their rotation. The word "ADAMS" is written in white on a black rectangular background. To the right, "ADAMS/Engine" is written in red. Below this, a detailed 3D cutaway illustration of an engine is shown. At the bottom right, the text "MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive" is written in blue, with the Mechanical Dynamics logo below it.

Mechanical Dynamics

The slide features a light-colored background with a gear icon in the top left and a 3D engine cutaway in the top right. The word "ADAMS" is written in white on a black rectangular background. The word "Agenda" is written in red. Below it, a list of four items is shown, each preceded by a red square bullet point. At the bottom right, there is a dashed teal arrow pointing upwards and the Mechanical Dynamics logo.

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

Vision of ADAMS/Engine

„ Reducing significantly time and cost of engine development in benefiting from the wide range of dynamic simulation capabilities in ADAMS and it's superior template based modeling environment.“

The Team behind ADAMS/Engine

- World market leader for functional virtual prototyping and full system analysis with the ADAMS productline
- Global network for sales, customer support and services
- 280 employees

- Internationally recognized leader in the design and development of internal combustion's engines
- Supplier of advanced test and instrumentation systems
- 800 employees

Each partner represents more than 20 years experience!

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

ADAMS

The Industry behind ADAMS/Engine

- Members of ADAMS/Engine Consortium

- Members set goals and requirements for ADAMS/Engine

ADAMS

ADAMS/Engine Consortium Objectives

- Specifications written by the automotive community
- Software development by MDI & FEV
- Software validation through automotive community
- Resulting commercial product sold and maintained by MDI & FEV

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

Agenda

- History
- The ADAMS/Engine Environment
- The Valve Train Dynamics Modules
- Conclusions

Why ADAMS/Engine

- Fast design and performance improvements of internal combustion engines are a major concern of the car-industry
- There are significantly more engine designs than vehicle designs in the world
- So far mostly in-house software or single function software from AVL and RICARDO are applied
- The „*Digital Car Concept*“ requires a modular environment for components, subsystems of different complexity (suspension, driveline, engine, ...) up to a full assembled vehicle - ADAMS/Car & ADAMS/Engine are key to this strategy

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

Why ADAMS/Engine?

Many customers want a simulation environment in order to prototype their engine designs prior to physical test or as a way of testing that does not exist today.

*The Waukesha ATGL
5000 HP engine*

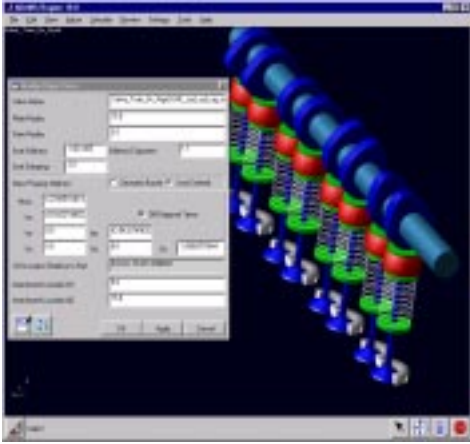

Cost in fuel to test for 500 hours: Over \$300,000

The ADAMS/Engine Environment

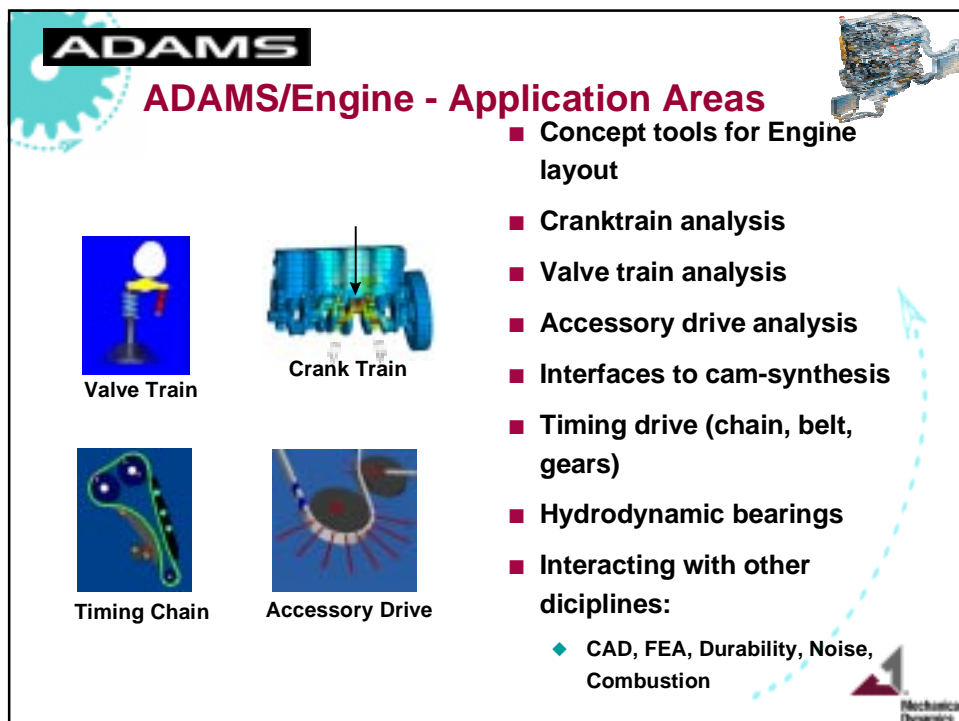

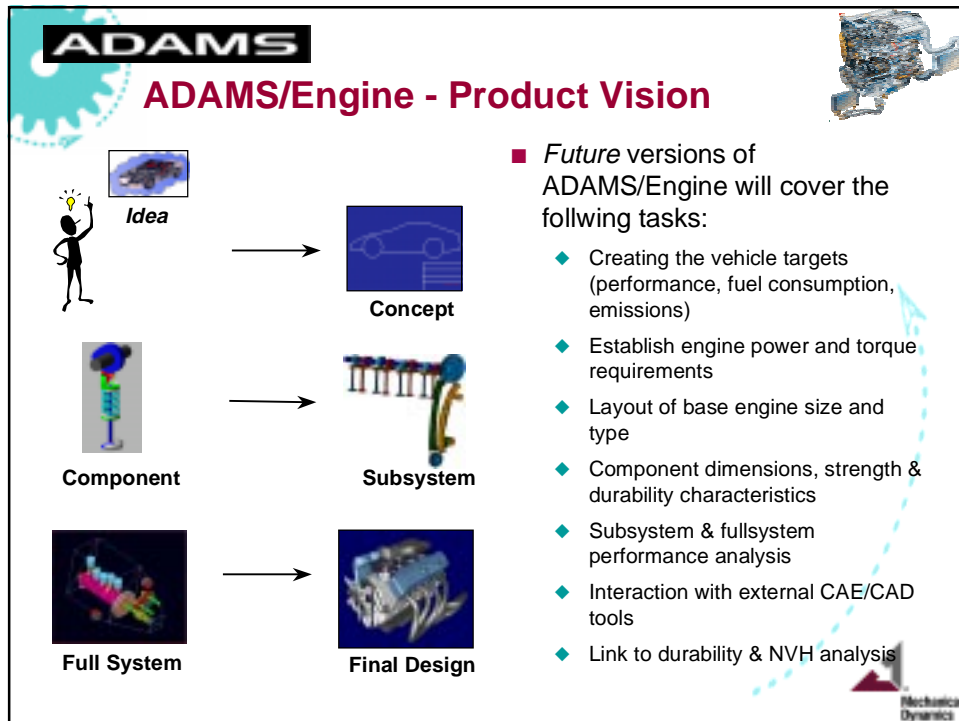

- „Functional Virtual Prototyping“ for the engine development process
- A „toolbox“ for all relevant engine components and subsystems
- Component and full system analysis in one single environment
- Applicable from concept phase up to final design sign-off
- Based on ADAMS/Car technology

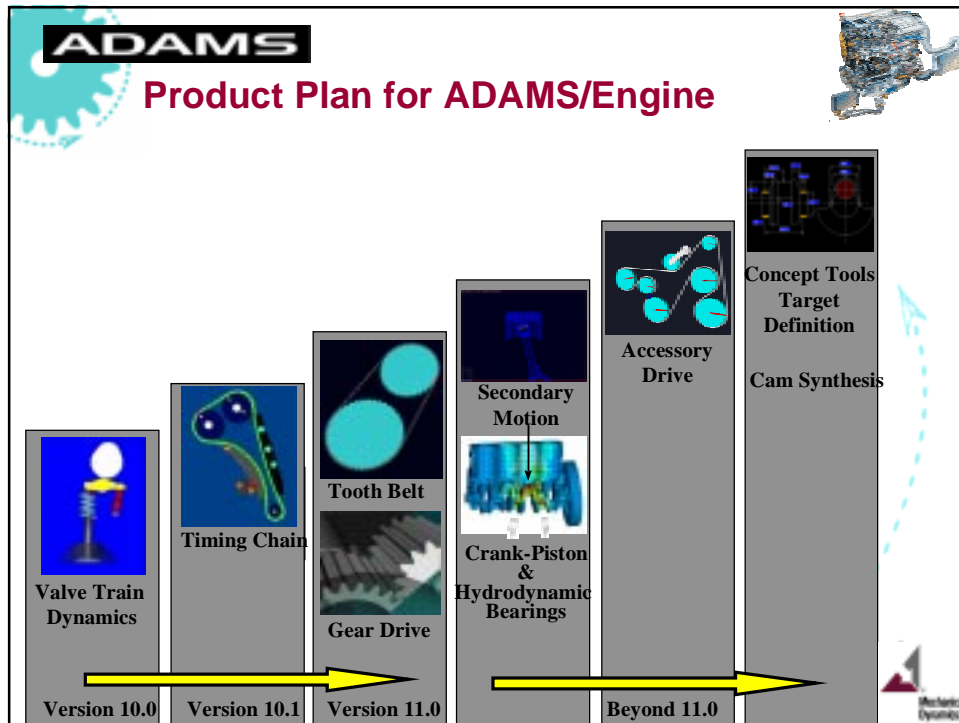

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

Agenda

- History
- The ADAMS Engine Environment
- The Valve Train Dynamics Module
- Conclusions

ADAMS/Engine - Valve Train Dynamics

- First commercial ADAMS/Engine module
- Template based parametric modeling approach
- Compatible to ADAMS/Car
- Data management based on TEIM-ORBIT Neutral Data Format
- Different user modes (standard/expert user)

1st Choice for single and complete valve train analysis!

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

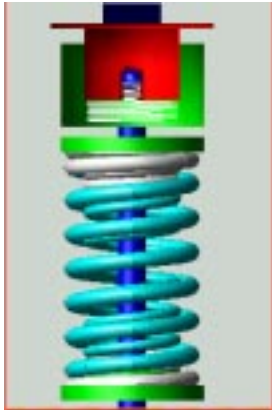

Problems Solved with the "Valve Train Dynamics Module"

- Performance improvements
- Calculate durability requirements
- Compute noise & vibration excitations
- Calculate lift-off and rev. limit
- Complementary to traditional experimental methods
- Encourages innovative new design ideas

Modelling Elements

- Valve Spring
 - ◆ Multi-mass spring (coil clash, spring surge)
 - elliptical or rectangular wire cross section
 - barrel, conical, double conical shaped
 - progressive or linear
 - ◆ Linear spring damper
 - ◆ Nonlinear spring damper (hook to curve editor)

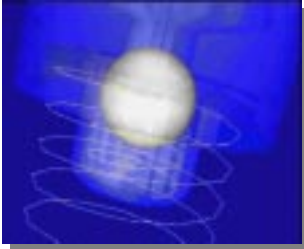

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

Modelling Elements

- Hydraulic Lash Adjuster
 - ◆ Simple Spring-Damper
 - ◆ Detailed Hydraulic Representation (valve in housing or piston)
 - Fluid Compressibility
 - Oil flow through check valve
 - Oil flow through leakage gap

Modelling Elements

- Contacts
 - ◆ curve to point
 - ◆ curve to flat
 - ◆ curve to circle
 - ◆ curve to curve
 - ◆ sphere in socket
 - ◆ sphere on plane
 - ◆ cylinder on plane
 - ◆ point on plane
- Contact Characteristics
 - ◆ lift off
 - ◆ hertzian pressure
 - ◆ friction
 - ◆ nonlinear stiffness

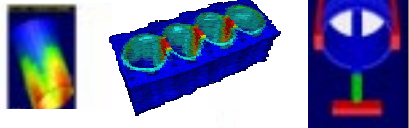

ADAMS/Engine

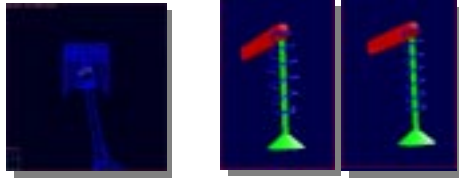

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

ADAMS

Modelling Elements

Flexible Cylinder Liner and Barrel

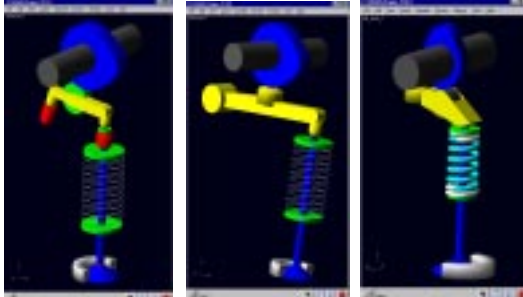

Flexible Piston Modal Valve Spring

- Flexible Components
 - ◆ Rocker
 - flexible body
 - ◆ Pushrods
 - beams
 - parametric flexible body
 - ◆ Camshaft
 - torsional flexible
 - flexible body
 - ◆ Valve
 - axial flexible
 - ◆ Valve Spring
 - parametric flexible body

ADAMS

Basic Valve Train Library

- Overhead Camshaft (OHC)
 - ◆ Finger Follower
 - with/without Roller
 - with/without Hydraulic lash adjuster

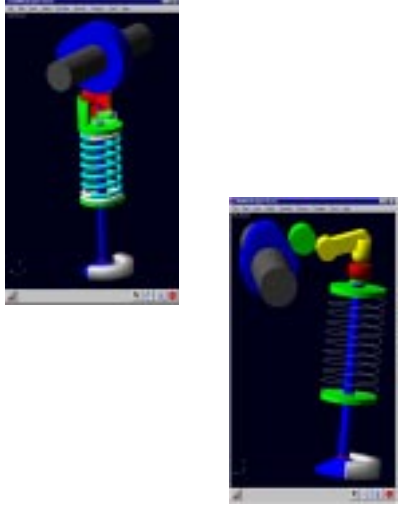

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

ADAMS

Basic Valve Train Library

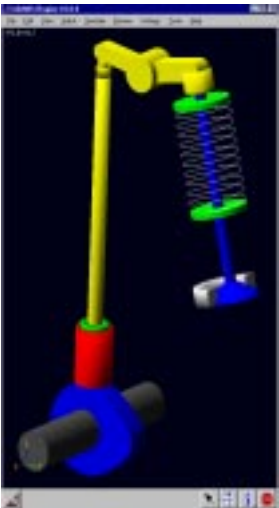

- Overhead Camshaft (OHC)
 - ◆ Bucket Tappet Assembly
 - with/without Hydraulic lash adjuster
 - ◆ Rocker Arm
 - with/without Roller
 - with/without Hydraulic lash adjuster

ADAMS

Basic Valve Train Library

- Overhead Valve (OHV)
 - ◆ Pushrod
 - with/without Roller
 - with/without Hydraulic lash adjuster

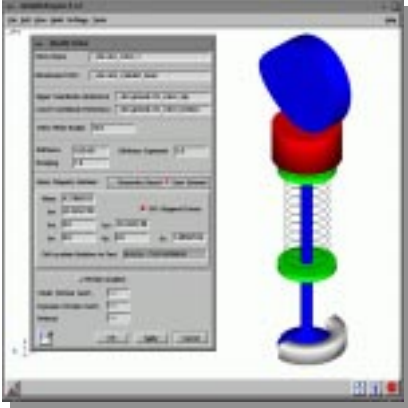

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

User Modes

- Template Builder mode (Expert)
 - ◆ Define generic engine components
 - ◆ Parametrics is created on the fly
 - ◆ Template storage in shared and private databases
- Modelling Elements:
 - ◆ Cam
 - ◆ Tappets
 - ◆ Valve
 - ◆ Valve Spring
 - ◆ Rocker Arms
 - ◆ Push Rod
 - ◆ Roller
 - ◆ Contacts

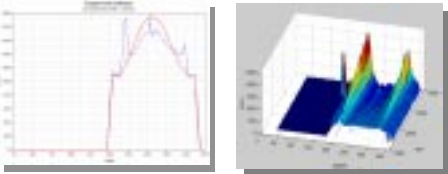

User Modes

Performing the Analysis

- Standard User mode (Designer)
 - ◆ Change subsystem parameters
 - ◆ Run standard analyses
 - ◆ Perform post-processing

Results (transient post processing)

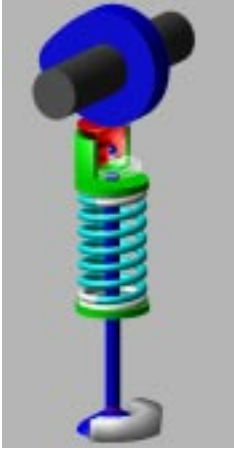

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

ADAMS

Example: Single Valve Train including Hydraulic Lash Adjuster & Multi-mass Spring

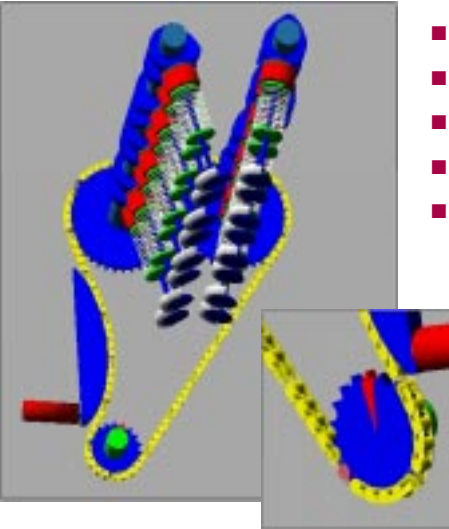

- Conceptual layout
- Verification of cam profiles
- Hertzian pressure
- Component optimization
- Rev. limit calculation

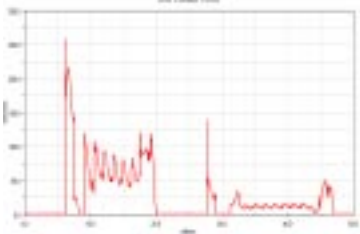

ADAMS

Example: Timing Mechanism combined with a Complete Valve Train

- Chain Dynamics
- Tensioner performance
- Determination of load histories
- Friction losses
- Determination of critical system frequencies

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

ADAMS

Example: Timing Belt Simulation

- Belt dynamics
- Belt tension force
- Determination of load histories
- Tensioner Performance
- Determination bearing loads
- Identification of critical system frequencies

Mechanical Dynamics

ADAMS

Agenda

- History
- The ADAMS/Engine Environment
- The Valve Train Dynamics Module
- Conclusion

Mechanical Dynamics

ADAMS/Engine

MDI's New Development Tool for Valve Train Dynamics, Timing Chain and Belt Drive

What does the Customer get?

- One environment for all relevant tasks in Engine design for local and global design optimization
- Get the engine running in an operational environment (car, truck, test-rig, ...)
- Including auxillary components (engine mounts, tensioners, ...)
- Fast simulation turn around - quick results
- Help to bridge supplier and OEM
- A commercial and maintained software product
- A modular approach for full system simulation

Conclusion

- ADAMS/Engine is the No.1 solution to improve component structure, sub-system and full-system performance with respect to strength, durability and noise requirements early in the development process using one single simulation tool
- The valve train module is MDI's first commercial offer in this field and a good starting point for virtual engine development
- Assures fast ROI due to a complete engine component library and the assistance in implementing the technology together with MDI's and FEV's global implementation team

A big step towards the idea of a fully "Digital Car"
