

## 1995 European Users Conference

- MARC challenge in space structures analyses  
Needs for advanced structure technology** 1  
Dr. P. Agatonovic, D. Sygulla  
MAN Technologie AG, Germany
- Modeling the visco-elastic behaviour of glass** 2  
O. Hoitinga  
Phillips CFT, The Netherlands
- FEA of magnetostatic circuits with permanent magnets** 3  
Dr. T. Koppel  
Mettler-Toledo AG, Switzerland
- Simulation of the CO<sub>2</sub>-laser welding process** 4  
H. Lindl, F. Rick  
Institute of Machine Tools and Industrial Management, Munich Germany
- Application of contact analysis to the modeling of carton erection** 5  
Dr. S. Jones  
Unilever Research, United Kingdom
- New developments in burst strength predictions for locally corroded pipe-  
Lines** 6  
F. J. Klever, G. Stewart, C.A.C. van der Valk  
Shell Research BV, The Netherlands
- Finite element calculation of a shrink fit** 7  
Dr. E. Geibler  
Fraunhofer Institute for Chemical Technology, Pfinztal, Germany
- Simulation of rotary flow-turning of metallic materials by elastic-plastic  
Analysis** 8  
Prof. Dr. E. Doege, M. I. Rotarescu  
Institute for Metal Forming and Metal-Forming Machine –Tools, Hannover,  
Germany

<b>Simulation of time and temperature effects of elastomeric materials or How fast can a seal close a suddenly occurring gap?</b>	<b>9</b>
Dr. M. Achenbach Parker Pradifa GmbH, Germany H. Stehmans FES Finite-Elemente Service, Germany	
<b>Polymer friction models and their implementation into the FE-code MARC</b>	<b>10</b>
S. Hauk Institute for Production Technology and Forming Machines, Darmstadt, Germany Dr. K. Hornberger, Dr. E. Freitag Carl Freudenberg, Germany	
<b>Calculation of noise damping with elastomeric spring components</b>	<b>11</b>
F. Huls Hennigews Elastomer und Kunststofftechnik GmbH & Co. KG, Germany	
<b>A numerical experimentation for the industrial problem: Development of a new u-shaped form for ARCELIK dish washer machine Inner liner part</b>	<b>12</b>
M. Firat, M. Cetin ARCELIK Dish Washer Machine Plant, Turkey	
<b>Thermostructural analysis with contact problems in a continuum Casting ingot mould</b>	<b>13</b>
D. Amodio, M. Gambardella Prof. M. Marchetti, M. Stefanelli Department Aerospace, Rome, Italy	
<b>Coupled thermo-mechanical finite element analysis for heating Reinforced concrete slabs in buildings-Simulation and comparison with Experimental results</b>	<b>14</b>
G. Mounajed, D. Caccavelli Centre Scientifique et Technique du Batiment, France J.-M. Dumay Electricite de France	

<b>Thermal analysis of a slab-on-ground heating floor in buildings</b>	<b>15</b>
<b>Numerical approach</b>	
B. Bedouani, D. Caccavelli	
Centre Scientifique et Technique du Batiment, France	
J.-J. Roux	
Institut National des Sciences Appliquees, France	
J.-M. Dumay	
Electricite de France	
<b>Sheet metal forming with MARC</b>	<b>16</b>
P. Nordlund	
ABB Corporate Research, Sweden	
<b>Adaptive meshing for forming sheet into complex geometries</b>	<b>17</b>
J. Spence	
Rolls-Royce plc, United Kingdom	
<b>FE-simulation of bending processes for vibration damping steel sheets</b>	<b>18</b>
L. KeBler	
Department of Forming Technology, Dortmund, Germany	
<b>Integration of the FE-simulation in a planning system for roll forming</b>	<b>19</b>
Prof. Dr. D. Schmoeckel, B. Sitzmann	
Institute for Production Technology and Forming MachinesDarmstadt, Germany	
<b>Simulation of the axial-radial forming process with the FE-program MARC</b>	<b>20</b>
F.-D. Speck	
Institute for Production Technology and Forming Machines, Darmstadt, Germany	
<b>FEM-simulatioin of deep rolling process</b>	<b>21</b>
U. Jung	
Institute for Material Science, Darmstadt, Germany	
<b>Optimization of hip joint endoprostheses by use of FEM</b>	<b>22</b>
H. Mayr, Dr. S. Ortloff, M. Lechner, Prof. Dr. H.M. Tensi,	
Institute for Materials and Processing, Munich, Germany	
E. Klotz	
Siemens AG, Germany	

<b>Optimization of unidirectional solidification methods for biomedical CoCrMo alloys using FEM</b>	<b>23</b>
Dr. H. Hooputra, H. Mayr, L. Michaelsen, Prof. Dr. H. M. Tensi, Institute for Materials and Processing, Munich, Germany	
<b>Numerical analysis of the pedestrian-car accident</b>	<b>24</b>
H. Bogenschutz, B. Mohrhardt, Prof. R. Steinbuch Department of Mechanical Engineering, Reutlingen, Germany H. G. König Department of Forensic Medicine, Tübingen, Germany	
<b>MARC as an analysis tool for tunnels and caverns</b>	<b>25</b>
M. Brandtner Technodat Salzburg, Austria	
<b>Modeling hydrogen induced cracking with MARC</b>	<b>26</b>
A.H.M. Krom, Prof. Dr. A. Bakker Laboratory of Materials Science, Delft, The Netherlands	
<b>The effect of reinforcement orientation on the creep deformation Behaviour of short fiber reinforced ceramic-matrix composites</b>	<b>27</b>
Mr. T. Zhang Department Physics and Technology, Hamburg-Harburg, Germany	
<b>Engineering analysis with MARC on IBM RS/6000 scalable parallel Systems</b>	<b>28</b>
Dr. A. Peters IBM, Germany	
<b>Partners in analysis</b>	<b>29</b>
L. Lewis Silicon Graphics, U.S.A.
