Hardware/Software Specifications

Licensing Requirements:

MDI supports two types of licensing: a network license that allows program execution on any computer on the network and a node-locked task-limited license which counts simultaneous users of product on a given system.

With either type of licensing, MDI requires that you choose a license server. You may choose only one(1) or three(3) license servers. MDI requires the following system information from the machine(s) you designate as the license server(s).

- 1) The host name of the license server machine. The host name is displayed by typing 'hostname' in the Command Prompt window.
- 2) The Hostid of the license server machine. The hostid is determined by typing 'ipconfig/all' in the Command Prompt window. Look for the line labeled "Physical Address".

*** Note: For either type of license, Windows NT Server is not required. However, you must install the following network software on both client and server systems, from your Windows NT CD-ROM using:

"Control Panel - Network - Add Software - TCP/IP Protocol"

The TCP/IP Protocol software is used to communicate with the license manager and MUST be installed on both client and server systems.

Comments:

Requires TCPIP Protocol Network Software installed from Windows NT CD-ROM. Requires ethernet card for licensing. Windows NT Server is NOT required.
