

Actran™™

The Leading Solution for Turbomachinery Noise Prediction

Product Overview

A powerful acoustic CAE tool for turbomachinery noise prediction

Actran™™ is the reference CAE tool for analyzing the sound radiated by turbo machines and for optimizing the related acoustic treatments. Actran™™ is used extensively by many leading aerospace companies that rely on the tools' accuracy, ease-of-use and performance for reaching their strategic acoustic design goals.

Actran™™ contains all advanced modeling features required for turbo machinery noise analysis. To capture the important convection and refraction effects, the sound waves propagate on top of a non-uniform background mean flow which can be calculated by Actran or imported from a CFD simulation. The influence of the mean flow on the performance of acoustic liners is accounted for thanks to the Myers boundary condition. The acoustic source is defined in terms of incident duct modes of arbitrary order and their amplitude can be defined in a variety of ways (e.g. normalized amplitude, intensity, equal distribution of energy on all propagating modes). Excitation from ducts of irregular shapes can be modeled using analytical duct modes. Both 3D and axi-symmetric models can be defined.

One of the challenges of acoustic CAE is to handle large models associated to high wave number and to large geometrical size and complexity. Actran™™ meets this challenge thanks to its efficient solver technology that includes advanced parallel processing.

Actran™™ is used not only for optimal aircraft engine nacelle liner design but also on inlet and outlet liners for helicopter turbines, environmental control systems (ECS) or auxiliary power unit (APU). Actran™™ is also used for non aerospace applications like computer cooling system noise and more.

Actran™™ DGM complements Actran™™ in order to solve problems involving complex shear layers and temperature gradients occurring at the engine exhaust (see Actran™™ DGM product sheet).

Target Applications

- Acoustic transmission through components in real-life mounting conditions
- Aircraft engine noise, including nacelle design
- Ducted cooling systems (electronic devices)
- Blower systems (air conditioning modules)
- Helicopter turbine noise

Key Features

- All Actran Acoustics features (see dedicated flyer)
- Acoustic propagation and radiation in a non-uniform mean flow
- Accurate modeling of liners including the effects of the flow (Myers-Eversman formulation)
- Infinite elements for unbounded domains
- Excitation defined by incident acoustic duct modes
- Harmonic analysis
- 2D, axisymmetric and 3D analysis
- Complete finite element library (tria, quad, tet, hex, penta, pyra, all in linear and quadratic forms)
- Direct and iterative solvers for improved efficiency
- Streamlined interface with leading CFD tools, including Fluent™, STAR-CD™ and Powerflow™ for importing mean flow
- Integrated flow solver for calculating background mean flows
- Available platforms: Windows 32 & 64 bits, Linux and most Unix platforms
- Integration in Actran VI

Actran Software Suite

Actran is a complete acoustic, vibro-acoustic and aero-acoustic CAE software suite. Empowered by the technologies of finite/infinite element methods (FE/IFE), as well as the Discontinuous Galerkin Method (DGM), Actran provides a rich library of materials, elements, boundary conditions, solution schemes and solvers. Actran is a high accuracy, high performance and high productivity modeling tool suiting the needs of the most demanding engineers, researchers, teachers and students for solving the most challenging acoustic problems.

Free Field Technologies (FFT)

Free Field Technologies is focused on three main areas:

- Developing Actran software for acoustic, aero-acoustic and vibro-acoustic simulation;
- Providing technical services, support, training and delivering acoustic engineering projects;
- Researching innovative technologies and methods of acoustic analysis in order to remain the leader in acoustic modeling.

Free Field Technologies has more than 250 customers around the world active in the Automotive, Aerospace, Shipbuilding, Electronic and Heavy Equipment industries as well as in the Educational and Research sectors.

FFT is a wholly owned subsidiary of MSC Software Corporation.
